Conjugated Linoleic Acid (CLA)

DESCRIPTION

Conjugated Linoleic Acid helps the body metabolize existing fat deposits to be used as energy by muscle cells and the liver. Conjugated Linoleic Acid is a great way to reduce fat and increase lean muscle mass safely and effectively. Unlike many supplements for weight loss, Conjugated Linoleic Acid does not contain any stimulants..

FUNCTIONS

Conjugated Linoleic Acid is completely natural and does not contain any stimulants or artificial ingredients. CLA reduces body fat and tones muscles by decreasing the ability of fat storage cells to take dietary fats from the bloodstream. Existing fat cells shrink and new fat cells are prevented from forming. In addition, Conjugated Linoleic Acid boosts metabolism and improves the breakdown of fat in muscle cells for energy. The result is a better appearance by decreasing fat and increasing lean muscle. Conjugated Linoleic Acid reduces ability of fat storage cells to take dietary fats from the bloodstream increases breakdown of fat in muscle cells for energy, increases metabolic rate to burn fat for energy more quickly, and supports decreased fat accumulation in the abdominal area.

INDICATIONS

Conjugated Linoleic Acid is recommended for maintaining blood glucose and cholesterol levels within normal ranges, weight management, energy and improved muscle mass for Weight Lifters/Body Builders.

FORMULA

Serving Size: 1 Softgel

Amount per serving:

Calories	10
Calores from Fat	10
Total Fat	1 g
Safflower Oil	1,000 mg
yielding (Tonalin® brand) CLA	800 mg

Other ingredients: gelatin, glycerin, purified water, caramel color, mixed tocopherols.
